

Pranav Bhardhwaj

Senior Data Analyst | Data Analytics | E-Discovery

Bengaluru, Karnataka, India | +91-8197183473 | [pranavbhardhwaj98@gmail.com] | [linkedin.com/in/pranav-bhardhwaj](https://www.linkedin.com/in/pranav-bhardhwaj) |

SUMMARY

Senior Data Analyst with 5+ years of experience in Data Analytics, eDiscovery, Digital Forensics, Data Operations, and Information Governance, progressing from Data Operations Associate to Senior Data Analyst at Consilio LLC, including a client secondment with Barclays. Experienced in delivering end-to-end data solutions across the complete data lifecycle, including data collection, extraction, ingestion, processing, validation, analysis, and reporting while consistently meeting SLA, quality, and regulatory requirements.

Skilled in SQL, Python, Excel, Power BI, Tableau, Microsoft Purview, Nuix, Relativity, Kusto Query Language (KQL), Azure Blob Storage, and AWS S3, with expertise in workflow automation, metadata management, ETL, UAT, root cause analysis, and enterprise data governance. Proven ability to lead cross-functional initiatives, collaborate with global stakeholders across APAC, EMEA, and North America, mentor analysts, and deliver scalable process improvements through automation and technical innovation.

Recognized for identifying critical data quality issues, optimizing enterprise workflows, developing internal automation solutions, and supporting high-profile investigations and regulatory compliance initiatives. Seeking opportunities to contribute analytical expertise, technical leadership, and process optimization skills in a Senior Data Analyst, Lead Data Analyst, Data Operations, or Investment/Asset Management Analytics role.

CORE SKILLS

Querying & Programming	SQL (SSMS, MySQL), Python, KQL, PowerShell
Data & BI	Excel (Advanced), Power BI, Tableau, Pivot Tables, large-scale data QA
Data Governance & Compliance	Regulatory data handling, audit trails, Microsoft Purview, information security protocols
Platforms Used in Regulated Environments	Bloomberg Vault, Discovery Accelerator (Veritas), Global Relay, ServiceNow
Cloud & Storage	Azure Blob Storage, Amazon S3
Delivery	UAT/QA testing, workflow automation, root cause analysis, cross-regional stakeholder coordination

PROFESSIONAL EXPERIENCE

eDiscovery Technical Analyst (Client Secondment) | Barclays

Sep 2024 – Mar 2026 • Northampton, UK

- Executed parallel-run testing comparing the incumbent platform (Veritas) against a newly adopted collection tool (Global Relay), documenting output discrepancies to inform the bank's migration decision.
- Tested Microsoft Purview's handling of a Copilot-generated data type — a first for the team — and authored documentation now used as a reference for future collections.
- Collected and processed data from Email, Bloomberg, Teams and other communicative data types using Discovery Accelerator, Microsoft Purview and Bloomberg Vault maintaining full compliance with internal and regulatory data-handling standards.
- Coordinated with the global project management team across regions to keep multi-source data collection on schedule and audit-ready.

Senior Data Analyst | Consilio LLC

Apr 2024 – Present • Bengaluru, India

- Manage and prioritize multiple concurrent investigations end-to-end — data extraction, ingestion, processing, and loading — consistently meeting SLA targets through close coordination with project management and cross-functional global (APAC/EU/US) teams.
- Process multi-terabyte datasets in Nuix — deduplication, deNISTing, indexing, and search-term filtering — to prepare review-ready collections.
- Load and validate datasets in Relativity, designing and modifying SQL queries to ensure accurate metadata mapping and data integrity across projects.

- Conduct root cause analysis on data anomalies before they reach processing — including catching a duplicate-ingestion issue that reduced a dataset from 4TB to 500GB, cutting downstream processing time and review cost.
- Design SQL automation to rename over 400 custodian placeholders using PST filenames, eliminating a fully manual metadata-update process.
- Develop an internal Robocopy-based C# WinForms application for enterprise data migration, as an alternative for an existing commercial file-transfer tool.
- Implement multithreaded transfer management, pause/resume functionality, and automated HTML/CSV reporting within that application.
- Designed MySQL validation queries for UAT, identifying edge and corner cases and supporting successful static-machine deployment across EMEA and APAC environments.
- Act as standby team lead — coordinating analyst workloads, aligning priorities with global managers, and mentoring the team on SQL workflows and production issue resolution.

Progressed from Data Operations Associate to Data Analyst (2021–2024) before promotion to Senior Data Analyst — building foundational Relativity, SQL, and eDiscovery workflow expertise along the way.

EDUCATION

- B.Tech, Electronics & Communication Engineering — REVA University, Bengaluru — CGPA 7.26/10 — 2020
- Pre-University (PUC) — Sri Chaitanya PU College, Bengaluru — 84.16% — 2016
